

## SYNTHETIC GRASS FOR LANDSCAPES (EXCEEDS INDUSTRY STANDARDS)

Compacted Base Depth: 3 - 4 inches

Infil Depth: 3/4 inches

Site Preperation is noted in the instalation agreement.

### ARTIFICIAL TURF CARE

Although, synthetic grass is virtually maintenance free, you will need to care for your lawn in the following ways to help maximize the life span or your synthetic lawn. Using a firm bristle push broom and a leaf blower or a rake you can easily care for your artificial turf. You should blow off or rake your turf once per month to maximize its look, (OR AS NEEDED) to minimize build up uf organic debris. Once every 3 months the artificial grass should be rinsed and groomed with a push broom against the grain to help eliminate any debris and dust as well as stabilize the fibers.
